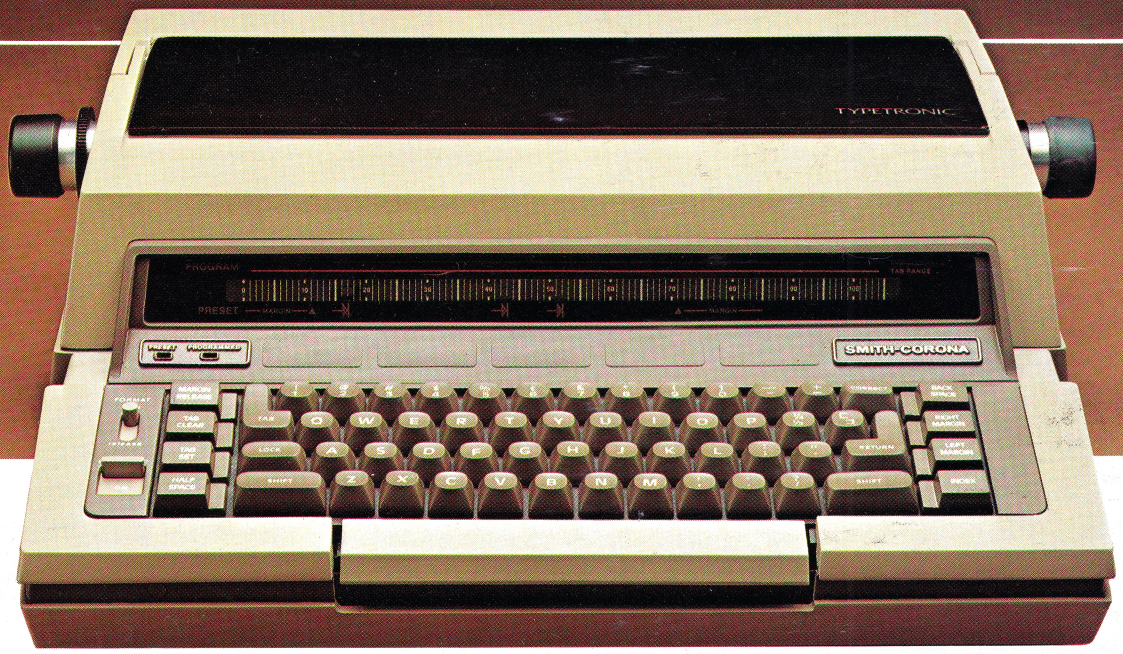
The TYPETRONIC™ office typewriter is a superior yet economical electronic alternative to the conventional office typewriter. New, exclusive electronic concepts enable the TYPETRONIC to provide new capabilities which improve the performance of most business typists . . . at costs no higher than for an ordinary office typewriter.

This electronic typewriter does more than an ordinary typewriter... but it costs no more.

Smith-Corona® Typetronic™

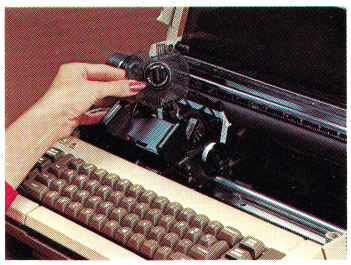
TYPETRONIC™



The Electronic Intelligence Center is the brain of Typetronic. An exclusive LSI chip contains the equivalent of over 30,000 transistors which react in thousandths of a second. The Typetronic has about half the parts of many ordinary office typewriters, which means more dependability and fewer parts to break down.

Memory Correction. This is one of the vast improvements over the standard office electric. It lets you remove any or all of the last ten characters automatically. Touch a key, the error's gone, whether it be a single character or an entire word. Any typing error is keyboard correctable on the Typetronic.

Ultrasonic Keyboard. The Typetronic uses a patented sonic system which identifies and types the letters you touch by analyzing sound waves. This is an engineering and economic



advancement over other office typewriters which require pulleys, gears, springs and levers, or an intricate maze of wires, to make the type impression after you touch the key.

Memory Speed Cushion. The Typetronic eliminates problems when you type certain words at extremely high speeds. It stores the letters in its

memory until you return to normal typing speed. On ordinary office typewriters, such bursts can result in dashes, voids, piling or jamming. It won't happen with the Typetronic.

Fixed or Programmable Page Formats. MARGINS. Typetronic's memory offers preset margins at the conventional positions for standard letters. Margins can be re-programmed at any desired position by the touch of a button. TABULATION. Typetronic's memory offers preset tab stops at a standard paragraph indent, center of the line, and standard signature block positions. Tabs can be re-programmed at any desired position by the touch of a button. Typetronic also provides an innovative reverse tabulation for statistical and columnar typing.

Change Typestyles in Seconds. Personal, businesslike, or statistical? Typetronic allows you to change typestyles in seconds simply by changing printwheels. A printwheel library of five typestyles costs less than one or two printwheels used on higher priced electronic typewriters. The printwheel is made of a special high impact, glass-reinforced nylon that is amazingly durable.

Easy Load Cassette Ribbons. If you thought changing ribbons was easy in your present office electric, you're in for a surprise. With Typetronic, touch a lever and the used cassette lifts out. Drop the new one into place and type —no threading, no alignment required.

Two printing/correcting systems are available:

- Lift-Rite correctable film with lift-off correcting tape, for highest quality typing, and
- Long-life fabric ribbon with a Re-Rite cover-up tape for greatest economy.

Typetronic correcting tapes have twice the capacity of most correcting typewriter systems.

Infinite Line Feed. To raise or lower the typing line in increments of less than a thousandth of an inch—185 positions per single line space.

Developed particularly for forms typing, it allows the typist to achieve any line spacing desired.

Typetronic Design Guided by Years of User Research. With the arrival of electronic typewriters in today's business environment, many are overloaded with impressive, but seldom used features. These may contribute little to performance, but they may add much to the cost and complexity of the product and its operation.

The TYPETRONIC is designed as a better, less costly way to do the work required at most individual typing stations. It is designed to sell at the price of conventional electric office typewriters— and to perform far beyond their capacities.

Specifications

- Writing Line—10.5"—26.67cm
- Page Capacity—13"—33cm
- Net weight—22.7 lbs.
- Shipping weight—26.4 lbs.
- Power*—117 volts 60 hertz; 65 watts operating, 3.23 watts idling, 1 ampere fuse
- Keyboard designation—#1063-45 key
- Ribbon cassettes available—Life-Rite—60,000 characters (10 pitch) Long Life Nylon—250,000 characters (10 pitch)
- Memory Correction—10 character
- Memory Speed Cushion—6 character
- Tabulation—Any 16 positions.
- Infinite Line Feed—185 positions per single line space.
- UL listed and CSA approved.

Typestyles available:

01—Standard Pica	87—Judicial Pica	91—Corporate Pica
66—Standard Elite	77—Presidential Elite	86—Classic Elite
	05—Script (Neutral)	93—Tempo Pica
		83—Tempo Elite

*Typetronic has two power modes. Power "on" provides full operating power. The "format" mode keeps the typewriter in stand-by position and retains all programmed instructions.
